

Wikipedia interest trend: English language

Findings by language

Lang	Article	Growth	YoY	Confidence	Why
de	Englische Sprache	-12.3%	-8.0%	High	sufficient history, low variance, no anomalies or seasonal confound
fr	Anglais	-39.4%	-19.3%	High	sufficient history, low variance, no anomalies or seasonal confound
es	Idioma inglés	-45.6%	-29.1%	High	sufficient history, low variance, no anomalies or seasonal confound
pl	Język angielski	-26.0%	-18.3%	High	sufficient history, low variance, no anomalies or seasonal confound
ja	英語	-24.4%	-14.9%	High	sufficient history, low variance, no anomalies or seasonal confound

Assumptions & limitations

- Pageviews measure attention, not purchase intent or willingness to pay.
- `agent=user` filters known automated/bot traffic at the source, but cannot catch all synthetic traffic.
- Wikipedia-edition readership is not 1:1 with a language's speaker population.
- All pageview data is fetched once at daily granularity and rolled up locally into complete calendar months (never taken from Wikimedia's own monthly bucket, which can include unreliable partial-month values) — see README for why.

Confidence labels come from a fixed, documented rule (span, data volume, coverage, variance, outliers, seasonality) — see README for the exact thresholds and why.
